Introduction

Temenos Banking Reference Process Repository is a collection of end to end reference processes related to Banking domain and it represents the accumulated industry knowledge gained by Temenos with the client engagements/implementation and it covers the wide range of banking domains as Retail/Corporate/ Private Banking as well as common cross-banking process such as Customer, CRM, Transaction, Treasury, Islamic and channel products.

It represents not generic but aligned business processes down to the individual roles, screens, outputs and workflows/functionalities which are available in the respective Model Bank.

Benefits of these processes are:

1. Leverages out banking know-how and industry experience
2. Understand business from a business and IT prospective
3. Compare with "As-is" process to identify the potentiation changes and related benefits

Temenos banking reference processes are updated using the Architecture for Integrated Information Systems (ARIS) tool. ARIS uses a modelling language known as event-driven process chains (EPC).

Details of Processes

Banking Reference Processes are updated based on the changes to Core Banking.

R18 TEMENOS Banking Reference Processes is a repository of **894** standard banking processes.

These processes represent the Model Bank support and functionalities to deliver banking services for various customer segments.
